

Generating testing certificates

First generate both the private key and the public certificate:

```
openssl req -x509 -newkey rsa -keyout key.pem  
-out cert.pem -noenc -days 1500 -subj "/CN=For  
testing purposes only (RSA 2048)"
```

Then merge both files into a single certificate (without password):

```
openssl pkcs12 -export -out  
certificate_testing_papers-rsa.pfx -inkey  
key.pem -in cert.pem -passout pass:
```
